Guide to Use ScreenCapture.exe

Setting FrameRate

You can use values from 0-to-6 to select the desired framerate.

```
>screencapture -fr 2
```

the above command will run the screencapture with framerate as third option 59.94(NTSC).

Setting Kvm

we can also enable or disable use of KVM by using switch

```
> screencapture -kvm 0
```

zero to disable and 1 to enable the kvm option.

setting roi option(region of interest)

just like kvm option we can select or unselect the option for roi.

```
>screencapture -roi 1
```

use zero to disable it and 1 to enable it.

Configure region of Interest

you can specify the region of interest , the region which will be shared. The -config switch is used for this purpose. Syntax : >screencapture X on screen,Y on screen,Width,Height , it will display the region with (x,y) coordinate as top left and also with specified width and height. example :

```
>screencapture -config 500,200,500,100
```

Note: try smaller values for Y and height.

it will select the screen coordinate (x,y) (500,200) and width of box as 500 and height of box as 100.

Setting mouse display

we can show or hide mouse by using following switch

```
>screencapture -mouse  0
```

use zero to disable it and 1 to enable it.

Setting webcam video

we can select webcam video by specifiying the name, if only name is provided the video settings will be auto detect.

```
>screencapture -wvideo "HP Truevision HD"
```

Providing settings for webcam video

it is recommended to provide videosettings when you have selected a webcam video
source, the following switch can help you

```
>screencapture -wvideo "HP Truevision HD" -wvideosetting "1280x720 30.00Hz"
```

Setting Webcam Audio

we can also select the webcam audio as follows

```
>screencapture -waudio "System Audio"
```

Setting Audio

This is Audio Settings which as not part of webcam , it is available directly on the
menu option.

```
>screencapture -as "System Audio"
```

Note : Combination of the above Switches is allowed throughout.
